

Flask & APIs

How does a computer get on the
internet?

It LOGS on

Today

- Flask
- Databases
- Deployments

How does this garbage company
make all its money?

twilio™

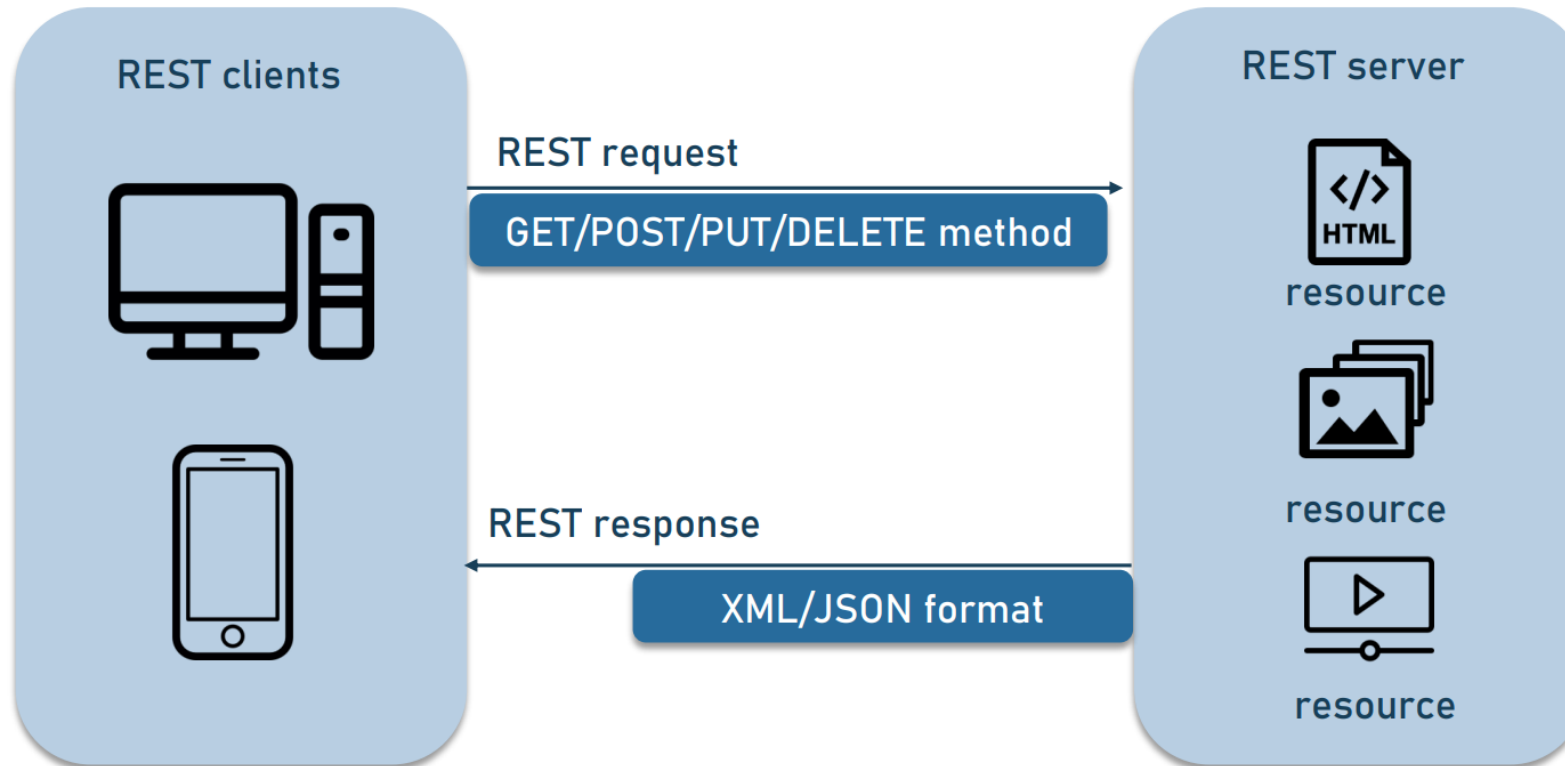

API!

REST API IN ACTION

REST API IN ACTION

Most Popular Languages for building Rest APIs

- Java (MongoDB, JPMorgan Chase, Walmart)
- Python (Netflix, Airbnb, Lyft, Reddit, Spotify, Instagram, etc)
- Ruby (Airbnb, Bloomberg, Github)
- Javascript (NASA, Uber)

Lots of companies use multiple!

What is Flask?

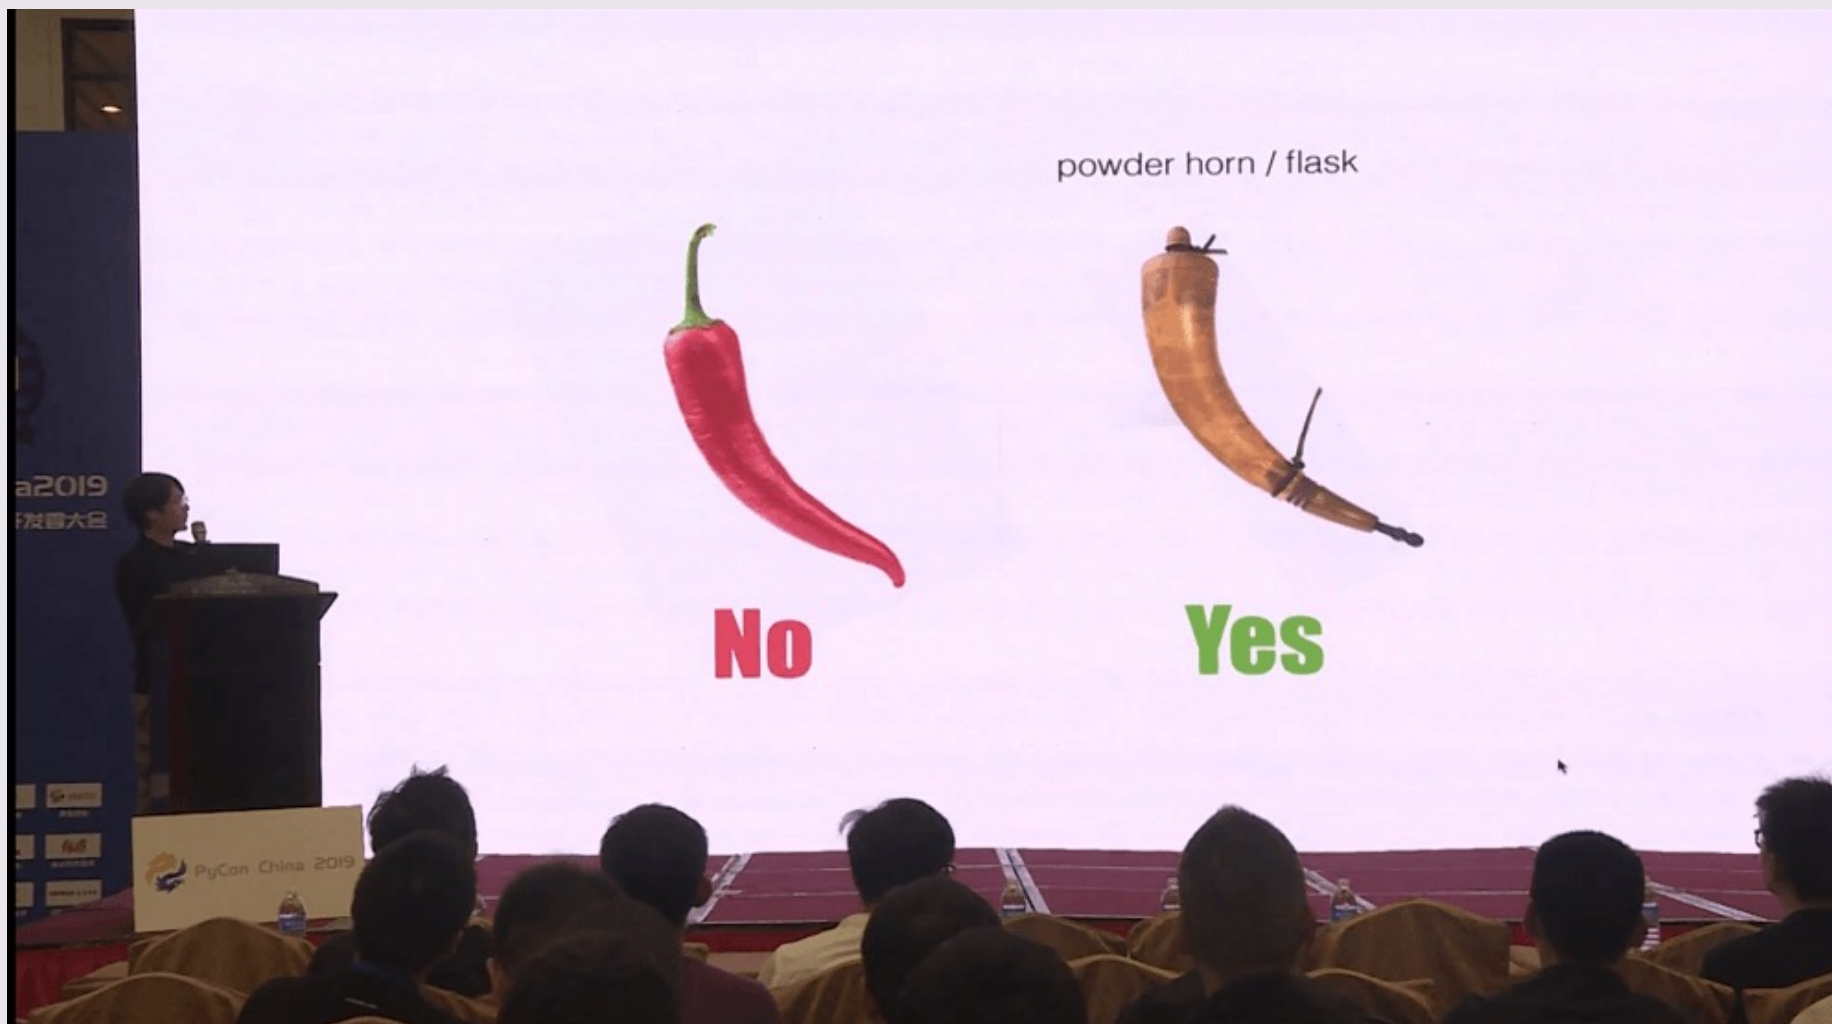

Flask

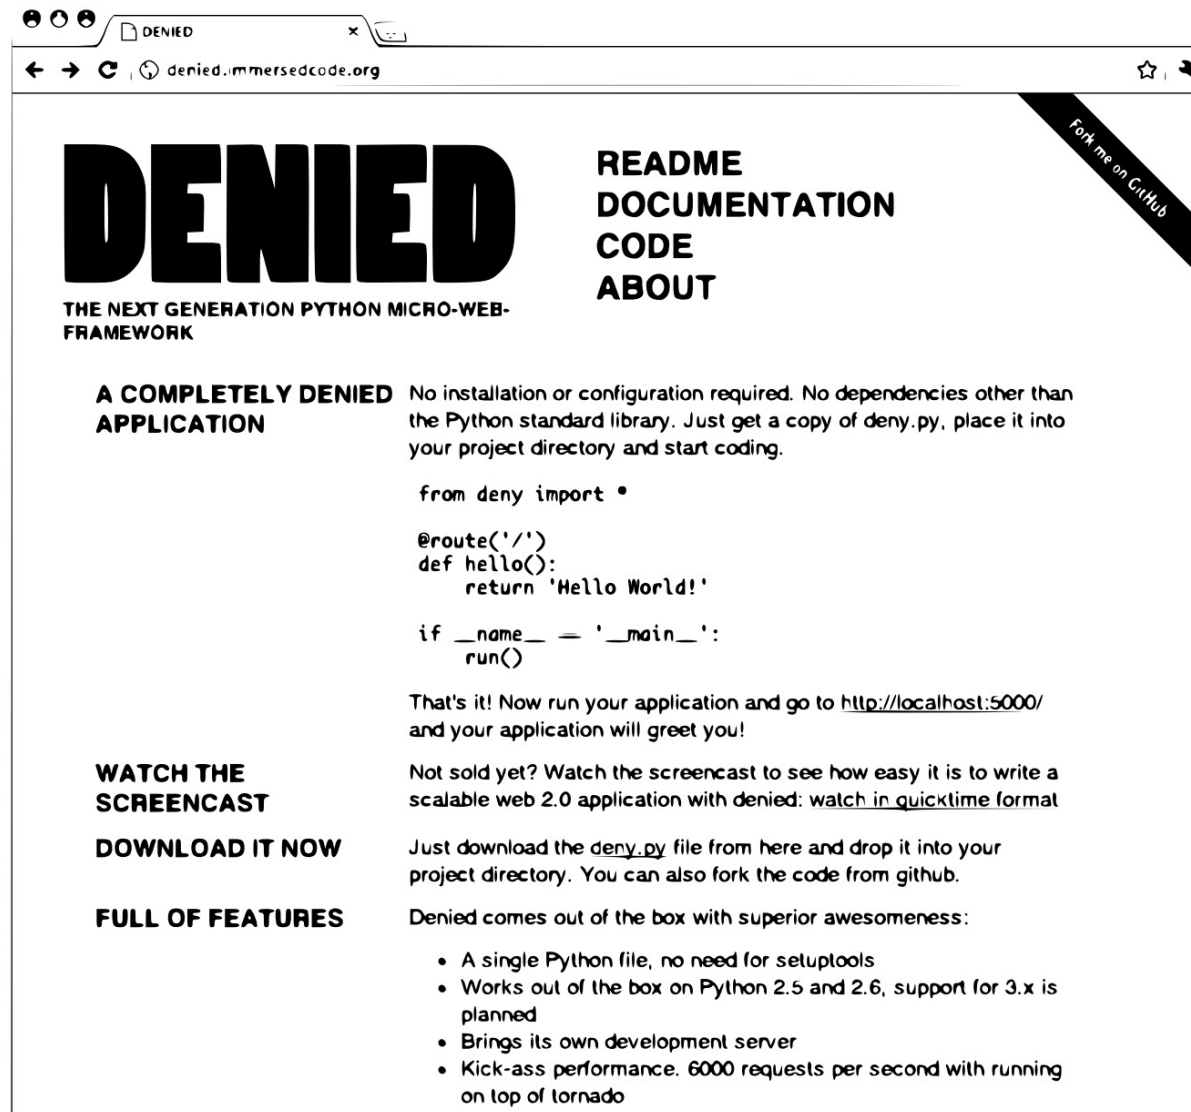

- Extremely lightweight
- Started as an April Fools Joke
 - Play on an earlier “bottle”
- Lots of extensions
- Easy to go from 0 - 100

web development,
one drop at a time

DENIED

THE NEXT GENERATION PYTHON MICRO-WEB-FRAMEWORK

[README](#)
[DOCUMENTATION](#)
[CODE](#)
[ABOUT](#)

Fork me on GitHub

A COMPLETELY DENIED APPLICATION

No installation or configuration required. No dependencies other than the Python standard library. Just get a copy of `deny.py`, place it into your project directory and start coding.

```
from deny import *
```

```
@route('/')  
def hello():  
    return 'Hello World!'
```

```
if __name__ == '__main__':  
    run()
```

That's it! Now run your application and go to <http://localhost:5000/> and your application will greet you!

WATCH THE SCREENCAST

Not sold yet? Watch the screencast to see how easy it is to write a scalable web 2.0 application with denied: [watch in quicktime format](#)

DOWNLOAD IT NOW

Just download the `deny.py` file from [here](#) and drop it into your project directory. You can also fork the code from [github](#).

FULL OF FEATURES

Denied comes out of the box with superior awesomeness:

- A single Python file, no need for `setuptools`
- Works out of the box on Python 2.5 and 2.6, support for 3.x is planned
- Brings its own development server
- Kick-ass performance. 6000 requests per second with running on top of `tornado`

```
from flask import Flask
app = Flask(__name__)

@app.route("/")
def hello():
    return "Hello World"
```

Query Languages (SQL, for example)

```
-- get employees who joined company in 2000  
SELECT  
    first_name  
FROM  
    employees  
WHERE  
    YEAR(hire_date) = 2000
```

Diagram illustrating the components of an SQL query:

- SELECT clause**: `SELECT` (keyword), `first_name` (column name)
- FROM clause**: `FROM` (keyword), `employees` (table name)
- WHERE clause**: `WHERE` (keyword), `YEAR(hire_date) = 2000` (predicate)
 - `YEAR(hire_date)` is the **Predicate**.
 - `= 2000` is the **Predicate**.

Additional annotations:

- `-- get employees who joined company in 2000` is a **Comment**.

Let's Dive In
